Envirologic is a privately held, Michigan-incorporated, S Corporation. We are a small business (as certified by the Small Business Association of Michigan), non-DBE firm operating in Michigan and throughout the U.S. for over 30 years. We are able to effectively and efficiently serve our clients throughout the region from our headquarters in Kalamazoo, Michigan.

Established in 1989, Envirologic is a full-service environmental consulting and services firm. Our environmental services include environmental due diligence, brownfield redevelopment, contaminant investigation and cleanup, regulatory compliance, ecological assessments, and a wide range of environmental field services. Our services are provided to a variety of industries including banking, government, manufacturing, petroleum, real estate development, agriculture, and utilities.

Envirologic can provide the following specific services:

- Environmental due diligence services including Phase I and II Environmental Site Assessments (ESAs), Baseline Environmental Assessments (BEAs), Due Care Plans, Hazardous Materials Building Surveys (asbestos surveys) and abatement monitoring, radon surveys, and lead inspections and risk assessments. Envirologic is experienced in successfully navigating the environmental process to ensure compliance when Small Business Administration (SBA) requirements are applicable to a project.
- Brownfield redevelopment services including access to grants/loans, development of Brownfield Plans for the capture of tax increment, and layering of incentives such as CDBG-funded programs, MSHDA programs, etc. We are skilled at developing strategies for projects that utilize traditional economic development tools along with brownfield redevelopment tools available from the U.S. EPA, state agencies, local Brownfield Redevelopment Authorities, and Land Bank Authorities.

- Hydrogeological site investigations, remediation design, and system installation and operation.
- Vapor intrusion studies, as well as design and construction of vapor intrusion mitigation systems (sub-slab depressurization systems).
- A full range of regulatory compliance services including audits, development of Contingency Plans, permitting services, etc.
- Wetland delineation and permitting, threatened and endangered species surveys, Natural Features Inventories, and other ecological services.
- Demolition specifications and oversight.

ENVIROLOGIC TEAM QUALIFICATIONS

Envirologic comprises 26 full-time employees consisting of highly qualified, experienced, and degreed hydrogeologists, geologists, biologists, environmental scientists, and environmental engineers. Envirologic maintains a “flat” organization whereby our senior-most staff are actively involved in day-to-day client communications and project management, including strategy development, data interpretation, and report writing. Our senior staff members are environmental professionals with 30+ years of relevant experience and are typically educated to a master’s degree level in their area of expertise. Senior staff is ably supported by a professional staff of educated and experienced personnel. We have ample capacity to manage multiple projects and have shown a history of being responsive to the needs of our clients and their stakeholders.

We continuously invest in staff training, certifications, and professional development to maintain a high level of knowledge. Personnel maintain their expertise through regular in-house training, attending technical conferences and seminars, and regular involvement in professional organizations such as the Michigan Association of Environmental Professionals, the Air and Waste Management Association, the American Institute of Professional Geologists, and others. All field personnel have been extensively trained in various safety programs, including Hazardous Waste Operations Emergency Response (HAZWOPER), First Aid, and CPR—most trained to a Supervisor Level.

CLOSING

Envirologic has the ability to provide a complete range of environmental services. In providing environmental due diligence services, we strive to ensure quality, completeness, timeliness, and service. We effectively communicate our advice to clients and users. Our work is consistently accepted by lenders, businesses, regulators, and others as complete and appropriate.

Our capabilities extend beyond due diligence services, providing access to a variety of expertise and programs. Through implementation of various brownfield programs, Envirologic can provide direct financial benefit to projects and clients. Through our other technical abilities, such as regulatory compliance and ecological services, we are able to look at the “complete picture” of a development or acquisition and evaluate several parameters that affect project success and value—not just environmental cleanup liabilities. We have the ability to develop strategies and navigate complex timelines across various regulatory programs.

We believe our service helps clients achieve success in their endeavors. Envirologic’s history of service and expertise has helped clients grow their business; acquire new land, buildings, and ventures; and operate their business in efficient, compliant ways. From the simple to the complex, each client and project receives our care, creativity, and expertise. We would be pleased to discuss our qualifications further with you should you have any questions. For more information or to discuss how Envirologic’s team can best serve your needs, please contact Erik Peterson, Manager of Due Diligence Services, at peterson@envirologic.com.
